How do Place Types work?

Place Types are tools for guiding development. They provide a way to shape the future of our community by focusing on context (the look and feel of places and their form and character) instead of focusing only on conventional land use categories. A palette of Place Types is under development that represents the unique places in our community. Each Place Type provides guidance on a series of elements such as density and building height. Collectively, the defined elements of each Place Type help ensure that future development creates the desired character and function.

Elements of Place Types
